## Description

The vessel consists of overlapping layers of pandanus. The leaves are thin, lying on top of each other with no discernible space between them. The edges are serrated. Towards the opening, the edges of the individual layers have uniform height. Towards the bottom, the layers have a downward oval notch. The base consists of several leaves of the same size, one above the other. They spread on one side. Because of this, the vessel stands a bit crooked. The distance between the edges of the layers increases towards the opening. Inner surface: color becomes lighter towards the bottom. The innermost layer is only half.
